TOMATO WASHING PROCEDURE

AS NEEDED CLEANING

TOMATO WASHING

SUPPLIES:

KAY® Vegi Wash

KAY® Fruit and Vegetable Wash Handler Kit (Bucket, strainer and lid)

Other supplies needed:

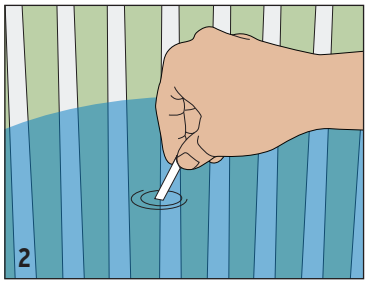

Clean, Sanitized Tomato Storage Colander with Lid

Chlorine Test Strips

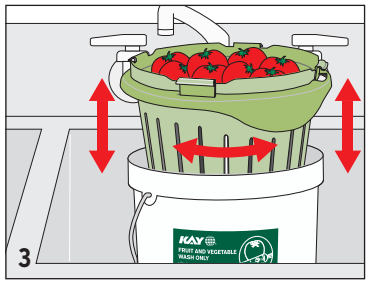

IMPORTANT: Hands should be thoroughly washed before beginning any food preparation activities. Make sure the bucket, handler, utensils and other equipment are cleaned, sanitized and ready for use.

- Place clean and sanitized Wash Handler into Wash Bucket
- Fill bucket with 2.5 gallons of **lukewarm** (85°F - 105°F) water
- Add 1 Vegi Wash packet; agitate Handler to mix

- Check concentration of Vegi Wash Solution with Chlorine Test Strips; 100 ppm is the target dilution
- If Solution is below or above 100 ppm, make another Solution and retest

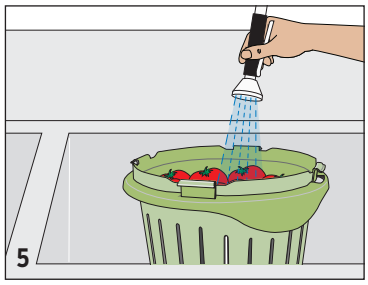

- Add whole tomatoes to Wash Handler
- Move Handler in an up and down motion several times to agitate until all tomatoes are fully covered with Solution

NOTE: Make sure to allow Solution to fully cover tomatoes

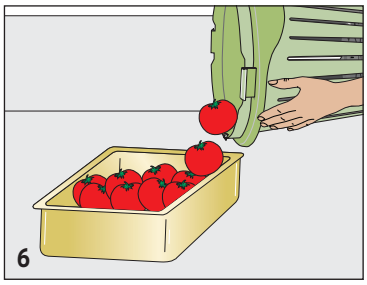

1 minute

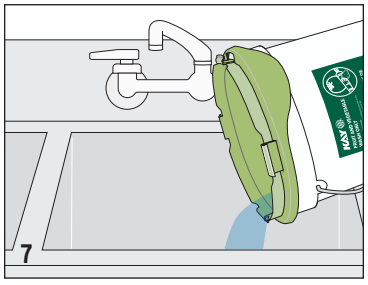

- Place lid on top of bucket
- Allow tomatoes to soak for 1 minute, making sure all tomatoes are covered by the Vegi Wash Solution

- After 1 minute, lift Handler out of bucket and allow all the Solution to drain into the bucket
- With tomatoes still in the Handler, rinse thoroughly under **cool** running water in the vegetable preparation sink

- Empty clean tomatoes into the tomato storage colander; place lid on top of colander
- Mark 24 hr holding time on storage colander
- Place storage colander, with tomatoes inside and lid on top, in your designated refrigerated storage area

- Empty Handler and Bucket in 3-compartment sink
- Wash bucket in a **hot** SolidSense™ APSC Solution
- Rinse with **hot** water
- Sanitize with Solidsense™ Sanitizer for at least 1 minute
